Description

Our focus is to develop mini grids (Stand alone or connected) on the basis of (low cost) energy produced by our **Low Head small hydro power units**. (200 kW to 3 MW).

Our customers: local communities or villages / rural electrification authorities / power consuming businesses in remote area running on Diesel generators.

Our client should be located around rivers with water flow above +/- 10 m³/s (also in dry season to increase payback of investment) having small existing weirs (3 to 10 meters dam) or rapids with about 5 to 10 meter level variation.

We assist to provide the financing for the turnkey package including : hydro power scheme + the complete mini network till the consumer (+ substation to grid if required) + power storage (or Energy mix) for peak consumption and network stability if needed + mobile prepaid electricity solution to be implemented.

Our solutions provide the cheapest energy for rural electrification.
